5184 & 5263 nm

nanoplus Distributed Feedback Lasers (**DFB**) are specifically designed for high-precision gas detection using tunable diode laser absorption spectroscopy (**TDLAS**). Our devices operate **reliably** in more than 50,000 installations worldwide. For 25 years nanoplus has set the standard for DFB laser technology and is the only manufacturer routinely providing DFB lasers at **any wavelength**.

Key features:

- MONOMODE
- CONTINUOUS WAVE
- ROOM TEMPERATURE
- MODE HOP FREE TUNING

Overgrowth-free DFB device processing

Any **custom wavelength** is possible: You tell us what you need and we deliver it. With our patented DFB technology we design any wavelength **between 760 nm and 14 μm**.

Our excellent **spectral purity** is characterized by a large side mode suppression ratio (**SMSR**) of **> 35 dB**, giving your system a low signal to noise ratio against crossinterference.

A **narrow linewidth below 3 MHz** guarantees ultra-precise scanning of the absorption line feature. The **high output power** of **several mW** yields a stronger signal and increases your measurement precision.

Fast and wide wavelength tuning is required for in situ systems. Most customers use a scan rate of 10 kHz and benefit from our very **large tuning coefficient**.

“Do not change your ideas, let us deliver the laser that fits your application.”

We offer **various packaging options**, e.g. several free space housings including TEC and NTC, fiber coupling, **collimation** and **custom designs**. What do you require?

If you require **custom specifications**, please contact us. Nearly 80 % of our devices are more or less customer-specific. As nanoplus is a **fully vertically integrated company**, we control the entire process chain from design to packaging. Both nanoplus production facilities are based in **Germany**. To guarantee consistent product quality we apply a strict and **ISO certified quality management system** at all levels.

nanoplus DFB lasers on TO66, TO5, TO5.6, c-mount and SM-BTF

Our sales and R&D teams have long-standing experience in developing lasers. They will advise you in your design and realization phase as well as after-sales: **We make market leaders!**

Superior Specifications: 1742.0 nm

This data sheet reports performance data of a **sample nanoplus DFB laser at 1742.0 nm with enhanced specifications**. Standard specifications are available at: nanoplus.com/DFB/1650nm-1850nm. These lasers are particularly suitable for hydrogen chloride (HCl) detection.

Typical room temperature cw spectrum of a nanoplus DFB laser at 1742.0 nm

Typical mode hop free tuning of a nanoplus DFB laser at 1742.0 nm by current and temperature

| electro-optical characteristics | symbol | unit | min. | typical | max. |
|--|----------------|---------|-------|---------|------|
| operating wavelength (at T_{op} , I_{op}) | λ_{op} | nm | | 1742.0 | |
| optical output power (at λ_{op}) | P_{op} | mW | | 5 | |
| operating current | I_{op} | mA | | 70 | |
| operating voltage | V_{op} | V | | 2 | |
| threshold current | I_{th} | mA | 10 | 25 | 30 |
| side mode suppression ratio | SMSR | dB | | > 35 | |
| current tuning coefficient | C_I | nm / mA | 0.008 | 0.02 | 0.03 |
| temperature tuning coefficient | C_T | nm / K | 0.07 | 0.10 | 0.14 |
| operating chip temperature | T_{op} | °C | +20 | +25 | +50 |
| operating case temperature* | T_c | °C | -20 | +25 | +50 |
| storage temperature* | T_s | °C | -40 | +20 | +80 |

* non-condensing

packaging

TO5 with TEC and NTC, black cap, AR coated window

TO56 without TEC or NTC, sealed, window

c-mount without TEC or NTC

butterfly package with TEC and NTC, SM or PM fiber, FC/APC connector

chip on carrier without TEC, with NTC

Technical drawings & accessories are available at: nanoplus.com/packaging
