1060nm - CW

Description

Amonics' ALS-OCT super-wideband light source provides high spectral density, above -30dB/nm, across 890nm to 1080nm. It is an ideal tool for the characterization of fiber laser components. This broadband source is also extremely effective in high resolution optical coherent tomography (OCT) applications. It is available in both benchtop and module casings.

The benchtop version incorporates a user-friendly front panel housing with a LCD monitor display, key switch, power control knob and optical connectors. RS232 or Ethernet computer interface is also equipped.

The OEM module version is an ideal building block for OEM system integration, especially in fiber optic sensing and optical tomography applications. It requires a single +5V power supply only.

Application

- Optical tomography
- Optical Gyroscope
- DWDM Component characterization

- Fiber Optic Sensing
