## STR-793-12-D1

### Radar Target Simulator, Direct Reading, 76 to 81 GHz

### **Description:**

**Model STR-793-12-D1** is a radar doppler simulator that operates at 78.5 GHz with a bandwidth of ±2.5 GHz and a WR-12 waveguide input/output. The simulator utilizes a single-sideband-modulator to modulate the incoming signal transmitted by the radar under test and sends back either a higher or lower band signal through a diplexer. The frequency-shifted signal is transmitted back to the radar

under test as a Doppler signal. Target characteristics are adjusted by changing the I and Q channel frequency and phase. The routing attenuation is adjusted by the direct reading attenuator.

### **Features:**

- Single Sideband Output
- Simulated Target Speed and Size Adjustable
- Simulated Target Moving Direction Switchable
- Instrumentation Grade

**Electrical Specifications:** 

### **Applications:**

- Doppler Target Simulations
- Radar System Testing

#### Note:

- Eravant reserves the right to change the information presented without notice.
- Models with different operation frequencies are available under a different model numbers.
- A 78.5 GHz Radar Target Simulator with a **level setting attenuator**, instead of a direct reading attenuator, is available as model **STR-793-12-L1**.

### **Caution:**

- Exceeding absolute maximum ratings of the device will damage the device.
- Proper torque, 8.0 ± 0.15 inch-pounds (0.92 ± 0.05 Nm), should be applied. Eravant torque wrench, model SCH-08008-S1, is highly recommended.
- Any foreign objects in the waveguide will cause performance degradation and may damage the device.
